

DIAMOND SERIES™

UK CONFIGURATION

SMP Canada offers a variety of options when it comes to horizontal headwall solutions. These headwalls are available in single tier, double tier, triple tier, or custom fit options. The Diamond Series headwalls are a perfect solution for any healthcare facility. These units offer many advantages such as our “Lift & Drop” technology, which allows the laminate fascia to have no exposed screws and allows the unit to be serviced with ease preventing down-time. In addition, SMP headwalls feature internal raceways which allow for true separation of medical gas and electrical components. Our proprietary profile which encompasses smooth rounded edges delivers an infection control measure like no other.
